EXT 100

Solenoid Valve with Extension

Patent # 6,945,512

Made in USA

2 inches of extension

The EXT 100 PVC valve is a revolutionary product created specifically to simplify the irrigation industry. This valve no longer requires the use of expensive adaptors or teflon tape and elevates the need for bulky pliers and the necessary above average hand strength to tighten these unnecessary parts. The inlet side that connects to the main water source was creatively designed to not only accept any standard 3/4 inch PVC pipe, but also slips easily into any standard 1 inch fitting, or it can be simply reduced by inserting a 1/2 inch reducer... three sizes, one valve! The outlet side is the only genuinely PATENTED available attached option of it's kind with a double O-ring sealed extendible PVC member rated at up to 1500 psi, ensuring a permanent seal every time. We went above and beyond it's industry crushing design and constructed it of only the highest quality parts and materials. With features such as heavy duty, corrosion/UV-resistant PVC, all high quality stainless steel parts, a nylon-reinforced Buna-N diaphragm & Buna -N seat seal and a high-flow, low friction loss design with a pressure range of 10 to 150 psi and flow range of 1 to 30 GMP... it provides superior and dependable operation in both potable and dirty water applications.

BOTTOM LINE - The EXT 100 is the most versatile and easiest valve to install of it's kind on the market today! Why use anything else?
